Course Overview

The RCRA sets forth an approach for handling the volumes of waste generated in the United States each year. Based on the authority granted by RCRA Subtitle C, EPA developed regulations for the cradle-to-grave management of hazardous waste. Persons who produce hazardous waste, called hazardous waste generators, are the first link in this cradle-to-grave system. The RCRA regulations establish basic hazardous waste management standards for generators.

The generator regulations ensure that hazardous waste is appropriately identified and handled safely to protect human health and the environment, while minimizing interference with daily business operations. RCRA training (initial and refresher) is required for generators of hazardous wastes. A solid foundation in the generator regulations is critical to a thorough understanding of the regulations governing the management of hazardous waste from the moment it is produced, or the point of generation, through final disposition.

Course Description

In compliance with U.S. EPA regulations, this Resource Conservation and Recovery Act (RCRA) training is for individuals who deal with or manage hazardous waste. This training must be provided for these employees at the start of their job and on an annual basis. This includes supervisors, hazardous waste generators, environmental compliance professionals, hazardous waste specialists, etc.

The RCRA regulations establish a comprehensive hazardous waste management system under the authority of RCRA Subtitle C. RCRA regulates hazardous waste from its point of generation through its point of final disposal. Hazardous waste generators must undergo RCRA training and are the first link in the cradle-to-grave hazardous waste management system. Pursuant to the authority granted by RCRA §3002(a), EPA has developed generator standards that address on-site accumulation of hazardous waste, cradle-to-grave tracking (manifest system), labeling, and recordkeeping and reporting requirements. These standards are found in 40 CFR Part 262.

RCRA Training Online Course Features

- Includes 1 full length video
- Professional voiceovers
- Over 20 interactive flash animations
- Award winning content
- CEU's
- Self grading quizzes and final exam
- OSHA Study Timer (tracks your study time login and logout at your convenience)
- Certificate of Completion (3 certificates)

Our courses are designed by information architects, graphic designers, and seasoned degreed health and safety professionals. What type of education or experience does your HAZWOPER training provider possess?

RCRA Hazardous Waste Accumulation Time Limits

Pursuant to §262.34(a), an LQG is allowed to accumulate RCRA hazardous waste on site for up to 90 days in specified units without obtaining a storage permit or interim status, provided he or she complies with Part 265 management standards for specific units as specified in §262.34. (It is important to note, however, that generators that accept waste from other generators or from off-site locations are owners or operators of storage facilities subject to Parts 264 and 265.)

An SQG may accumulate up to 6,000 kg of hazardous waste for 180 days or less without a storage permit or interim status if he or she complies with the modified standards in §262.34(d). If the TSDF is 200 miles or more away, the generator may accumulate hazardous waste for 270 days or less (§262.34(e)). Note that these extended time limits only apply to SQGs accumulating waste in tanks or containers. SQGs who accumulate waste in containment buildings or on drip pads are subject to the accumulation standards for LQGs.

RCRA Training and Certification

At successful completion of the course, you will receive 3 certificates and your certificates will be stored in our National Repository® for future reference. An e-certificate will arrive via email and the other two (8x10 and wallet card) will arrive in the U.S. mail.
